HONOURY POSITION

Honoury clinical teacher to Nottingham Medical School

.RESEARCH

Following the M1 Kegworth air crash on the 8 January 1989. I collated clinical material and documented the injuries sustained by victims of the air crash.

As a result of research carried out, a number of review articles and publications of the findings of the accident have been produced. In addition I have extensively lectured and given scientific papers, both nationally and internationally, on aspects related to the incident. A major finding of the study was to identify a new crash 'brace' position that will protect occupants involved in an impact air crash.

Thesis :- Impact Biomechanics of the Pelvis and Lower Limbs In Impact Aircraft Accidents

From the clinical data collected from the M1 air crash it became apparent that preconceived ideas as to injury causation may be incorrect. The studies indicated that severe lower limb injuries could be sustained in the absence of secondary impacts, and that the position the lower limbs adopt can effect the injuries seen.

*Book :- The Management of Disasters and Their Aftermath. Editors :- WA Wallace
JM Rowles CLColton*

As a result of my time spent in research I developed an interest in the management of disasters. This culminated in the production of a book outlining our experiences from the air crash as well as experiences gained from other disasters.

SPECIAL EXPERIENCE

Media Experience :- As research registrar to a high profile research group I became extensively involved with the mass media. Ultimately this resulted in the production of a documentary on the M1 air crash for the BBC.

Medical Officer Donington Racing Circuit :- In 1987 I became one of the regular medical officers at Donington racing circuit

PREVIOUS MEDICO-LEGAL EXPERIENCE

I have been undertaking medico-legal work since 1994 when a Senior Registrar. Since becoming a Consultant Orthopaedic Surgeon in September of 1995, I have increasingly undertaken more medico-legal work.

At present I take instructions from over 500 cases per year. I undertake both Plaintiff and Defence work and have also undertaken medical negligence work. I have also been involved in Hospital Independent Review Bodies and work with the NHS Litigation Authority.

In the course of my medico-legal practice, I have been required to give evidence in Court, as well as attend Conferences with Counsel.

If references are required with regard to aspects of my work, I would be more than happy to supply names of instructing Solicitors for Plaintiff, Defence or negligence work.

I am a member of Medco and am currently up to date with their core training
